## PTC Now Offers Over 490 Control Arm Part Numbers

Increase your profits with one of the industry's fastest growing product line segments

PTC is pleased to announce the addition of Control Arms to our product offering. There are **over 490 part numbers available** that provide nearly 90% market coverage (may vary by region).

Automotive suspension replacement rates continue to rise with today's light weight suspension designs and control arms are one of the fastest growing product line segments in today's market. This represents a significant profit opportunity for our customers.

The primary function of a control arm is to provide a connection point between the body of the vehicle and wheel. This suspension design allows the wheel to move up and down, while the body frame and passenger compartment stays smooth and level.

The lower control arm works with the upper control arm to keep your wheel in alignment in all positions. This allows for more unrestricted up and down and swivel motions that are possible on newer vehicles. Any structural damage to a control arm can greatly affect the alignment and steering performance, and needs to be replaced in order to restore OE performance.

**Lower Control Arm**

**493 sku's available**

**PTC Control Arms** offer outstanding performance at an extremely competitive price. Control arms are thoroughly tested to ensure durability and feature lightweight aluminum construction (where required) as well as greaseable ball joints for easy maintenance and long life. All parts are **manufactured in TS16949-certified facilities**.

### Key Features and Benefits Include:

- Produced to exact OE dimensional specifications to meet or exceed OE form, fit and function
- Control Arms include ball joints and bushings (where applicable) assures ease of installation and a proper fit
- Light weight aluminum applications match OE design for less unsprung weight which minimizes stress on other chassis components
- 493 SKU's available provide coverage for most Domestic, Asian and European applications
- Customized competitive part number labeling available
