PTC Expanded Chassis Program Now Offers Over 1900 Part Numbers An Easy and Profitable “Add-on Sale” to the Rest of the PTC Program

PTC has worked hard this year to expand and fine tune our chassis program and are pleased to announce that our product offering now includes over 1,900 part numbers, including 490 Control Arm numbers, that provide over 90% market coverage.

Automotive suspension replacement rates continue to rise with today’s light weight and complex suspension designs, which represents a significant profit opportunity for our customers.

PTC Chassis Products offer outstanding performance at an extremely competitive price. All chassis parts are thoroughly tested to OE specifications to ensure proper performance and durability. Ball Joints and Tie Rod Ends feature greaseable ball joints for easy maintenance and long life. All parts are **manufactured in TS16949-certified facilities.**

Key Features and Benefits Include:

- Produced to exact OE dimensional specifications to meet or exceed OE form, fit and function
- All steel components are made from select carbon and alloy steels to ensure superior strength
- Ball Joints are made with a metal-to-metal ball socket design verses nylon bearing designs to eliminate premature wear
- Bushings are made with thermoplastic elastomers, OE rubber or nitrile materials for increased performance and service life
- Over 1,900 SKU’s available provide coverage for most Domestic, Asian and European applications, including 490 Control Arm numbers
- Ball Joints and Tie Rod Ends are supplied with greaseable zerk fittings (for most applications)
- Can be easily added on to existing PTC orders - no need to make a separate freight order for chassis parts
- Customized competitive part number labeling available
