New Complete Knuckle Assemblies

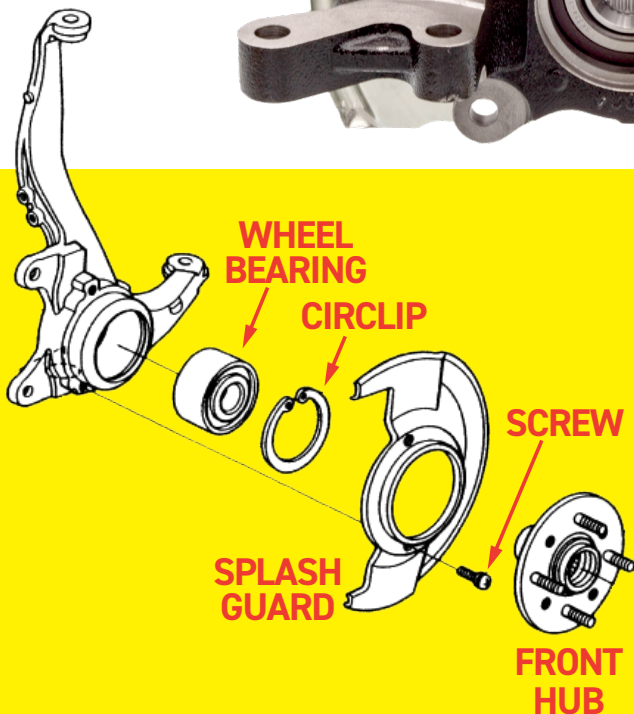

Easy Installation - Save up to 50% Labor Time!

The PTC New Complete Steering Knuckle Assembly program is designed to save time and reduce warranties by making problematic bearing replacement easier and eliminates unexpected delays.

Our preassembled units eliminate the need for specialty tools or a press resulting in a faster, easier installation that can save up to 50% labor time.

ASSEMBLIES INCLUDE:

- Knuckle Assembly (E-coated)
- Backing Plate (E-coated)
- Wheel Hub Assembly with Studs
- Bearing
- Lock Ring
- Axle Nut

THE PROBLEM: There is over a 30% failure rate on spindle hubs due to a damage from road hazards, collisions, or rust accumulation which causes the bearing race to seize to the hub and cannot be separated

THE SOLUTION: Replace the entire assembly to ensure OE performance is restored

BENEFITS:

- Save up to 50% labor time
- No need to source multiple parts
- Fix the cause; not just the symptom - by replacing all related parts subject to wear

NO SPECIALTY TOOLS REQUIRED!
