Premium Hub Assembly

Special E-Coating Provides Superior Protection in the Harshest Conditions *(Electrophoretic coating for corrosion-protection)*

- E-coating provides uniform, durable corrosion protection for hub assemblies while maintaining tight dimensional control on critical interfaces, ensuring long-term performance and reliability in demanding under-vehicle conditions.

Premium Quality Grease

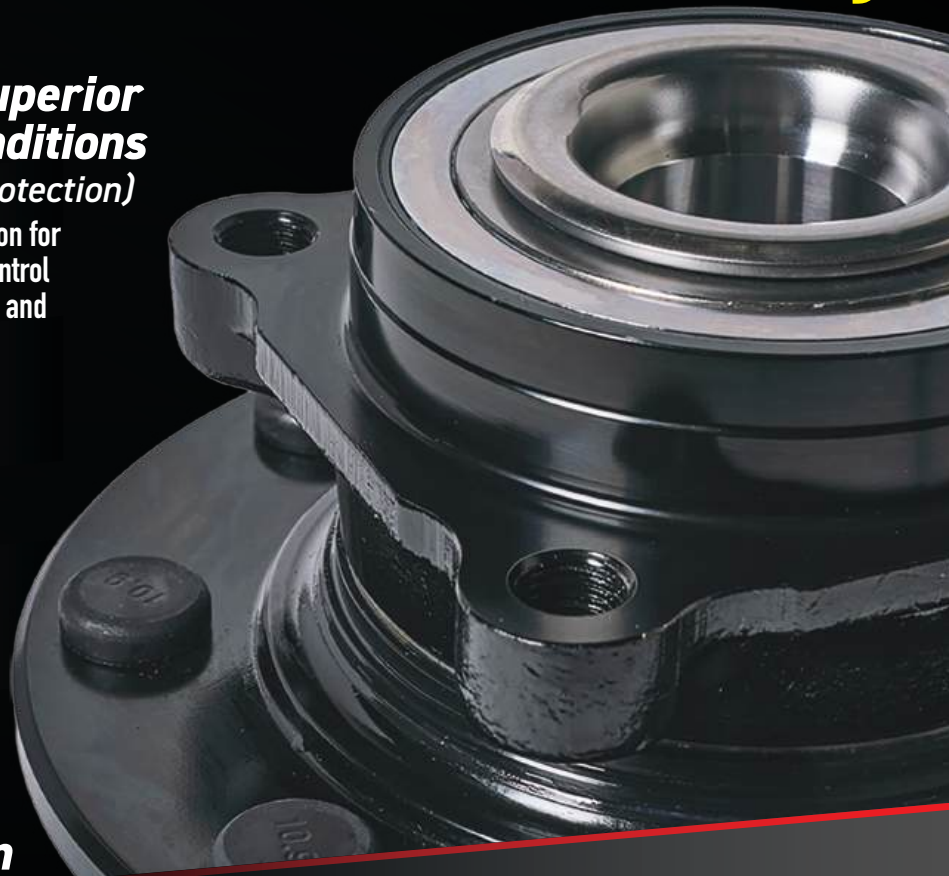

- Fretting Resistance
- Rust Prevention
- Heat Resistance

Upgraded ABS Cord

- Double O-Rings are added to improve waterproof performance of the sensor.
- Upgraded molded ABS connector to prevent breakage of ABS cable.

Premium Quad Lip Seal Design

- A premium quad lip seal is a high-performance radial shaft seal designed with four distinct sealing lips to provide enhanced protection, durability, and contamination control compared to standard single- or dual-lip seals. It's commonly used in automotive wheel hub and bearing assemblies and other harsh-environment applications.
- Benefits in hub assemblies
 - Extended bearing life
 - Improved protection against water and road salt intrusion
 - Reduced risk of grease leakage
 - Lower warranty risk
 - Improved performance in severe climates and off-road conditions
